

Monthly Review - August 2025

Market Highlights

- Markets continued to grind higher as earnings remained solid and expectations for a Fed rate cut increased. Trade and inflation uncertainty, and signs of stress in the labor market remain risks.
- The S&P 500 was up +2.03% in August and is now up +10.79% so far this year.
- U.S. Small Caps jumped +7.14% during the month, likely in anticipation of lower rates.
- S&P 500 sectors were all positive in August aside from Utilities. Materials (+5.76%) and Health Care (+5.38%) led the index higher during the month.
- The Russell 1000 Value (+3.19%) outperformed relative to the Russell 1000 Growth (+1.12%) in August, while the growth index continues to meaningfully lead over trailing 1 and 3-year periods.
- International markets continued a strong 2025, with the developed markets MSCI EAFE Index up +4.26% for the month and +22.79% this year. Emerging Markets rose +1.28% in August and are up +19.02% year-to-date.
- It was an impactful month for the Federal Reserve, with continued political pressure and a highly analyzed annual meeting in Jackson Hole. Markets cheered perceived dovishness from Chairman Powell. The Bloomberg Agg Bond Index rose +1.20% in August and is now +4.99% higher this year.

Important Disclosures

Investing is subject to a high degree of risk, including the possible loss of the entire amount of an investment. You should carefully review all information provided to you by Atlanta Consulting Group Advisors, LLC ("ACG"), including ACG's Form ADV Part 2A Brochure and all supplements thereto, as well as each investment's prospectus or offering materials, before making an investment.

This report is based on transaction records, portfolio valuations, and performance supplied by the client, the custodian, the investment manager, and investment/pricing databases including Morningstar, ICE, Refinitiv, and other sources. Due to the timeliness of this report, investment values and performance information may reflect preliminary estimates and is, therefore, subject to change.

The information contained herein reflects the opinions and projections of ACG as of the date of publication, which are subject to change without notice at any time. This material is for informational purposes only and should not be deemed to be investment advice or a recommendation to purchase or sell any specific security. While the information presented herein is believed to be reliable, no representation or warranty is made concerning the accuracy of any data presented. You should not treat this material as advice in relation to legal, taxation, or investment matters.

We urge you to take a moment to compare the account balances contained in this report to those balances reflected on the statements that you receive directly from your account's custodian. Please contact us or the account custodian with any questions you may have. Also, please notify us promptly if you do not receive statements on all accounts from the custodian on at least a quarterly basis. Please contact us promptly should you experience any changes in your financial circumstances, investing time horizon, or risk tolerance.

Performance Calculation Disclosures

Performance returns have been calculated using data supplied by the client, the custodian, the investment manager, and investment/pricing databases including ICE, Refinitiv, and other sources. ACG has not independently verified data provided by these third parties and does not guarantee the accuracy of any calculation based on such third-party data. No representations or warranties whatsoever are made by ACG or any other person or entity as to the future profitability of an account or the results of making an investment. Past performance is no guarantee of future returns. The performance contained herein is calculated net of fees, unless otherwise indicated, and is based on a security's market price as of the close of trading each business day. Returns for periods under twelve months are not annualized. Returns for periods over one year are annualized.

Time-Weighted Return (TWR) – Performance returns for client assets are generally shown as a Time-Weighted Return (TWR), which is a measure that calculates the compounded rate of growth of a portfolio or asset over a given period. TWR lessens cash flows' distorting effects on growth rates. The daily Modified Dietz calculation is used for TWR calculations.

Internal Rate of Return (IRR) – Performance returns displayed within each Private Assets Portfolio Overview, if included, are shown as an Internal Rate of Return (IRR) which measures the annual growth rate that an investment is expected to generate. IRR considers the amount of cash invested and the timing of the investment.

Index and Benchmark Information

Various indices shown in the Market Index Review and elsewhere (each, an “Index”) are unmanaged indices of securities that are used as general measures of market performance, and their performance is not reflective of the performance of any specific investment. Index comparisons are provided for informational purposes only and should not be used as the basis for making an investment decision. Further, the performance of an account managed by ACG and each Index may not be comparable. There may be significant differences between an account managed by ACG and each Index for reasons including, but not limited to, risk profile, liquidity, volatility, and asset composition. The performance shown for each Index reflects no deduction for client withdrawals, fees, or expenses. Accordingly, comparisons against the Index may be of limited use. Investments cannot be made directly into an Index.

Index Composite-Dynamic Benchmark – Where shown, the Index Composite-Dynamic Benchmark is an asset-weighted composite benchmark that is calculated based on the weight of each constituent benchmark in the underlying portfolio. This benchmark is rebalanced monthly, and the weight of each benchmark is determined by comparing the value of investments associated with the benchmark at the start of each rebalancing period.

Security and Investment Manager Summary Pages

This report may include one or more security/investment manager summary pages which include a description of the investment, historical performance returns and return summaries, sector allocations, and other information. This information is compiled from several sources including one or more of the following: the client, the custodian, the investment manager, Morningstar, ICE, and other sources. These pages are provided for informational purposes only and reflect the performance of the investment, as provided by Morningstar, over various time periods. While the information presented herein is believed to be reliable, no representation or warranty is made concerning the accuracy of any data presented. You should not treat these materials as advice in relation to legal, taxation, or investment matters.

The purpose of the security/investment manager summary pages is to provide a historical indication of the performance of the security or investment manager. In no way should either the Morningstar Return Summary or the Morningstar Annual Returns be considered indicative or a guarantee of the future performance of a client’s investment in that security or with the same manager, nor should they be considered indicative of the actual performance achieved by any client in the same security or with the same manager.

Other Definitions

Alpha – An estimate of risk-adjusted investment performance, where beta is used as a measure of risk. It is an indicator of the rate of return attributable to the investment manager after adjusting for the portfolio’s level of market risk. A positive Alpha indicates the investment manager has earned a higher rate of return than expected given the portfolio’s level of risk, while a negative alpha indicates the investment manager has earned a lower rate of return than expected given the portfolio’s level of risk.

Beta – Beta is a measure of systematic risk of a security or portfolio’s sensitivity to the market.

Downside Capture Ratio – This risk metric measures how well a manager performed during periods when the market fell. Downside capture ratio is displayed as a percentage.

Information Ratio – A measure comparing the returns on an investment to the amount of risk taken. It measures whether or not an asset received excess returns for the risk taken. The information ratio is similar to the Sharpe ratio. The only difference is that it measures returns against a particular benchmark rather than a risk-free rate and, therefore, measures the riskiness of the manager's active returns.

Modified Dietz Calculation – The Modified Dietz calculation is a widely used technique for calculating the rate of return on an investment portfolio that accounts for external cash flows, such as contributions or withdrawals. It provides a way to measure the historical performance of a portfolio by using a weighted calculation of cash flows during a specific period.

Multiple of Capital (MOC) – The Multiple of Capital is the amount of money gained from a position as a fraction of the money paid into the position.

Sharpe Ratio – A risk-adjusted measure of return which uses standard deviation to represent risk. It is calculated using annualized return in excess of return of the cash equivalent divided by the annualized standard deviation of the portfolio or benchmark. The higher the Sharpe ratio, the better the fund's risk-adjusted performance.

Standard Deviation – A statistical measure of risk reflecting the total variability (risk) of the portfolio or benchmark. It measures the extent to which the returns for a portfolio have varied from period to period and represents the dispersion of the periodic returns around the average return.

Tracking Error – Tracking error is the difference in actual performance between a position (usually an entire portfolio) and its corresponding benchmark. It is a measure of the risk in an investment portfolio that is due to active management decisions made by the portfolio manager, indicating how closely a portfolio follows the benchmark index.

Upside Capture Ratio – This risk metric measures how well a manager performed during periods when the market rose. Upside capture ratio is displayed as a percentage.
